Revolvers	7
Approved Processes	8
Rimfire to Centerfire Conversions	8a
Approved Barrel Processes	8b
Miscellaneous Approved Barrels	9

IMPORTANT NOTICES.

READ CAREFULLY!

- (1) All firearms, barrels, and processes listed in this document are approved by the Board of Directors for use in shooting activities of the North-South Skirmish Association, Inc. They have received “Production Approval”, which means that as manufactured they are pre-approved for skirmish use. An arm or barrel which has been altered or modified must be submitted to the Small Arms Committee for individual approval and must be issued a Small Arms Committee approval card before it can be used in a skirmish. *It is the responsibility of the skirmisher to find out if planned or executed changes might void the existing approval of an arm or a barrel, and to submit altered production arms and/or barrels to the Small Arms Committee for consideration.* If you are considering

making any changes to an approved arm or barrel it is good practice to discuss it first with a member of the Small Arms Committee.

2. The Small Arms Committee must individually approve custom-made arms for which the maker does not have production approval, and a Small Arms Committee individual approval card must be carried for that arm as evidence of that approval. Failure to have an approval card for a non-production-approved replica firearm will cause the disqualification of the shooter and/or the shooter's competing company, with appropriate penalties. ***It is the responsibility of the skirmisher to submit any custom-built arm for which there is no production approval to the Small Arms Committee for consideration.***
2. In this, and all other documents and publications of the North-South Skirmish Association, Inc., the terms "approval" and "approved", when applied by the N-SSA or its representatives, mean that the item to which the term is applied has been determined to meet the dimensional, configurational, functional, and historical criteria of the N-SSA, Inc. It does not in any way imply or guarantee the safety or the integrity of any firearm, barrel, or process.
2. Arms listed by Manufacturer are allowed for use in the N-SSA's competitive matches regardless of who the Importer or Vendor may be. When an Importer, or Vendor, name is shown it is only as a courtesy indicating that they submitted the arm for Production Approval. For example, a reproduction 1860 Henry Rifle made by Uberti is approved, regardless of the Importer's name on the barrel.

Notes to users:

1. "Makers" may include manufacturers, importers, and/or vendors.
2. Replica Arms Company is now owned by Navy Arms Company, and its approved products now carry Navy Arms Company markings.

1. Rifles

NB: The parentheses include the importer, company, organization, or individual who originally submitted the arm to the N-SSA for production approval, or specific information about the arm such as identifying markings and calibers.

US Rifle Model 1841 (Mississippi Rifle) & Variants (note specific calibers)

- 2) Pattern 1863 Enfield Rifle.....Jerry Harmon
- 3) Pattern 1853 Enfield Carbine (Musketoen).....Jerry Harmon
- 4) Austrian Lorenz.....Greg Edington, R.A. Hoyt

Approved Arms by Maker and Importer*

(With identifying marks when known)

01-01-2024
Edition

***N.B. – The Production Approval is for the Manufacturer who actually made the arm, not the Importer. Therefore arms so approved by a Manufacturer are allowed for use in the N-SSA’s competitive matches regardless of the import company markings. For example, a Henry Rifle made by Uberti is allowed with a plethora of different import markings. The only import markings shown in this list will be of the importer who originally submitted the arm to the N-SSA for a Production Approval.**

Anderson, Bridges & Mullen (Ceased operations)

Marks unknown

U.S. Rifle Model 1841 (Mississippi Rifle) – using Bill Large .54 caliber barrels

Antonio Zoli & Company
